

## CMC introduces the Connected Motorcycle World at Intermot

For the first time, the Connected Motorcycle Consortium will demonstrate connectivity and safety applications for motorcycles at a consumer show.

Thomas Bischof, coordinator in CMC says: "Together with other stakeholders in motorcycle connectivity, we will demonstrate safety applications designed for motorcycles. We're looking forward to get the motorcycle riders opinion about these future technologies. In particular, the system that warns car drivers that motorcycles are nearby, might inspire the riders. As we know, the other vehicle driver not seeing the motorcycle causes a majority of motorcycle accidents. Our systems will warn the car driver, when a critical situation occurs!"

The International motorcycle show Intermot takes place from 2<sup>nd</sup> to 7<sup>th</sup> October 2018 at the Koelnmesse in Cologne, Germany. The CMC stand, which is called 'Connected Motorcycle World' will be located in Hall 6, Stand number A040/B047.

CMC representatives will be available to visitors to demonstrate the connectivity applications on a motorcycle. Also, presentations are foreseen during the show, where more background information about the consortium and the technology will be given.

Next to the safety technologies demonstrated by CMC, across the 250 square metres of exhibition area one can try out the smartest technologies relating to motorcycles:

- in-helmet head-up displays,
- headsets for group talks,
- automatic emergency calls,
- apps that link them all together...

Biking will be safer and more relaxed than ever!
